EDUCATION

University of Sydney

Sydney

Bachelor of Science in Computer Science and Statistics | WAM: 80 | Dalyell Scholar (Academic Merit) July 2026

Relevant Coursework: Data Analytics: Learning from Data, Intro to AI, Systems Programming, Object Oriented Programming, Agile Development Practices

Professional Certification: AWS Cloud Practitioner, Azure Data Scientist Associate

EXPERIENCE

42Property

AI-Powered Buyers Agency Platform

Junior Software Engineer

October 2025 - Present

- Engineered modular system architecture in Odoo, designing relational data models (Clients, Agents, Properties, Portfolios) with computed fields and dynamic visibility conditions to improve data integrity and usability.
- Automated core workflows including rental yield calculations, client–property linking, and agent assignment logic, reducing repetitive updates and improving property tracking accuracy.
- Developed risk assessment, valuation, and AI-readiness modules to support downstream analytics, enabling seamless integration with external datasets and reporting tools.

University of Sydney

University

Denison Scholar – Summer Research Intern

January 2025 - March 2025

- Automated satellite data extraction and NDVI computation workflows in Python, replacing manual QGIS processes and improving consistency of vegetation analysis.
- Integrated the Sentinel-2 API and Google Earth Engine to fetch and preprocess large-scale imagery using multi-threaded pipelines, optimizing geospatial data preparation for analysis.
- Built a configurable geospatial processing pipeline supporting time-series analytics and reusable computation modules for environmental research applications.

Intersystems

Database Management System Provider for Hospitals

Software Engineering Intern

December 2023 - Feb 2024

- Delivered a full-stack Flask–React application automating clinical data entry and FHIR message generation, improving data consistency across hospital systems.
- Built backend pipelines for parsing and transforming unstructured medical inputs (PDFs, voice notes, free text) into structured, interoperable records using configurable templates.
- Integrated SNOMED-compliant data mapping and optimized database access layers to ensure efficient retrieval of clinical records for internal testing and validation.
- Worked cross-functionally with senior engineers and healthcare professionals to refine system architecture and ensure production readiness in clinical settings.

PROJECTS

ByteTide

P2P File-Transfer Program

- Built a peer-to-peer file-transfer system with Merkle tree–based integrity verification and anomalous data detection, ensuring reliability during distributed transfers.
- Designed a custom network protocol for TCP/IP communication using packet-based request (REQ) and response (RES) mechanisms, supporting fault-tolerant data exchange.
- Implemented multithreaded I/O management and adaptive scheduling to enhance throughput and performance across varying network conditions.

SKILLS

Languages: C, C++, C#, Python, TypeScript, JavaScript, SQL, Golang, R, Java, HTML, CSS

Frameworks: React, Next.js, Express.js, Flask, Django, AWS (Lambda, DynamoDB), Azure
